

Governance+ Solution for Microsoft 365 2026

We Make Microsoft 365 **Make Sense**

TeamsFox helps customers manage their Microsoft 365 environment, making it sustainable, cost-efficient, and secure.

By combining cleaner data with smarter governance, we'll enable your team to cut costs, unlock Copilot value, stay compliant amidst emerging EU data security regulations and advance Green IT goals.

Proven Across Industries

The Challenges With Microsoft 365

As Microsoft 365 environments scale, visibility fades. Licenses go unused, files pile up, and permissions drift.

The result is rising spend, growing risk, and a data landscape that slows productivity and decision-making.

Where Problems Take Shape:

Storage Bloat
& ROT

License Waste

Access Sprawl

Copilot
Readiness

44% of Microsoft 365 licenses are under-utilized or oversized

>30% rise in Microsoft 365 license prices since 2022

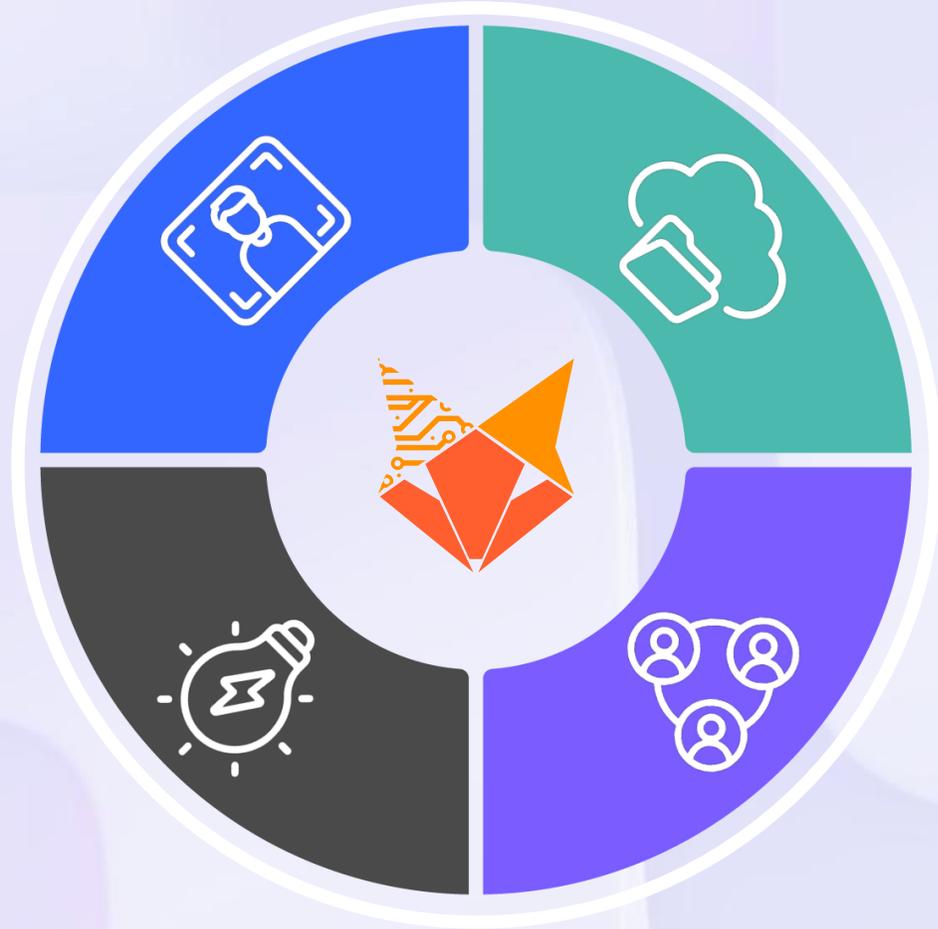

53% of companies have 1000+ sensitive files open to all employees

40% of stored content is redundant, obsolete, or trivial (ROT)

96% of IT leaders say their data is not AI-ready

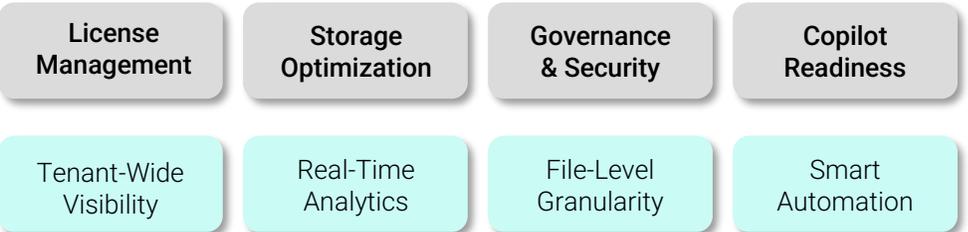

TeamsFox

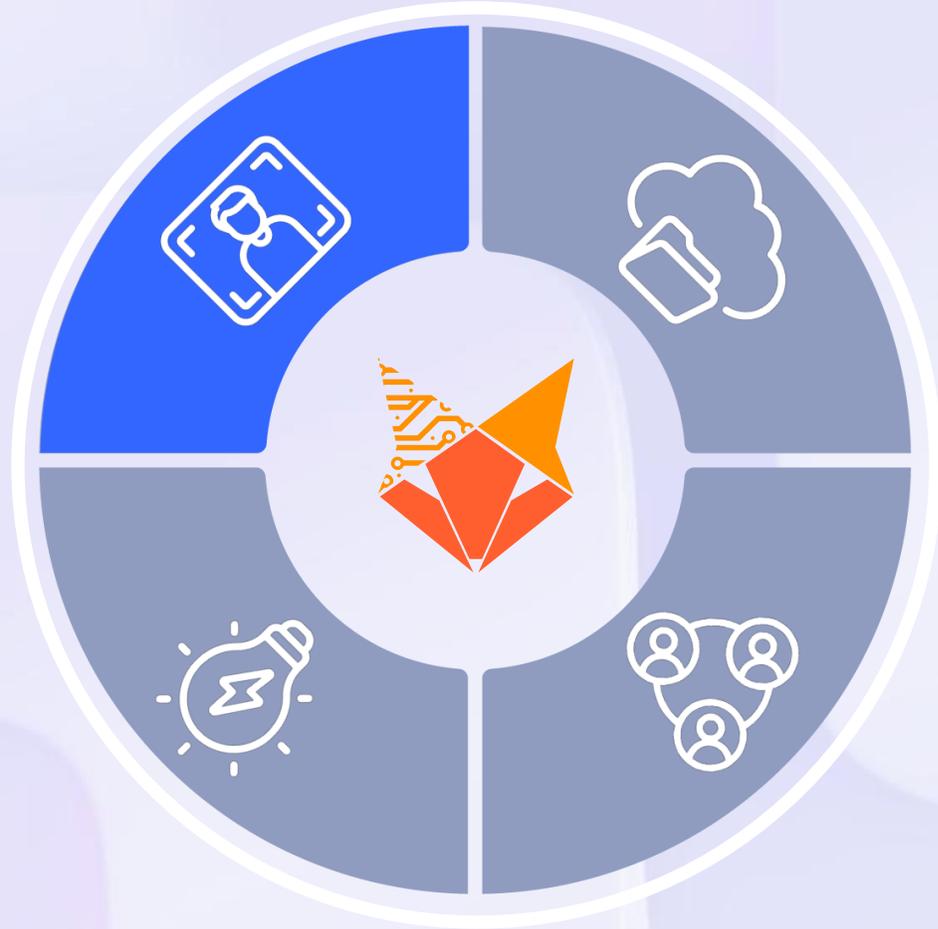

Core Capabilities

TeamsFox gives you a complete overview of your Microsoft 365 environment in one place.

It brings together live data on licenses, ROT, security exposure, engagement, and Copilot readiness so you can see where to act first.

Every section connects directly to deeper analytics and one-click actions across the platform.

TeamsFox License Management

Most Microsoft 365 tenants pay for seats or features that go unused.

TeamsFox connects real feature-use data with license assignments so IT and finance teams can see exactly where spend exceeds need.

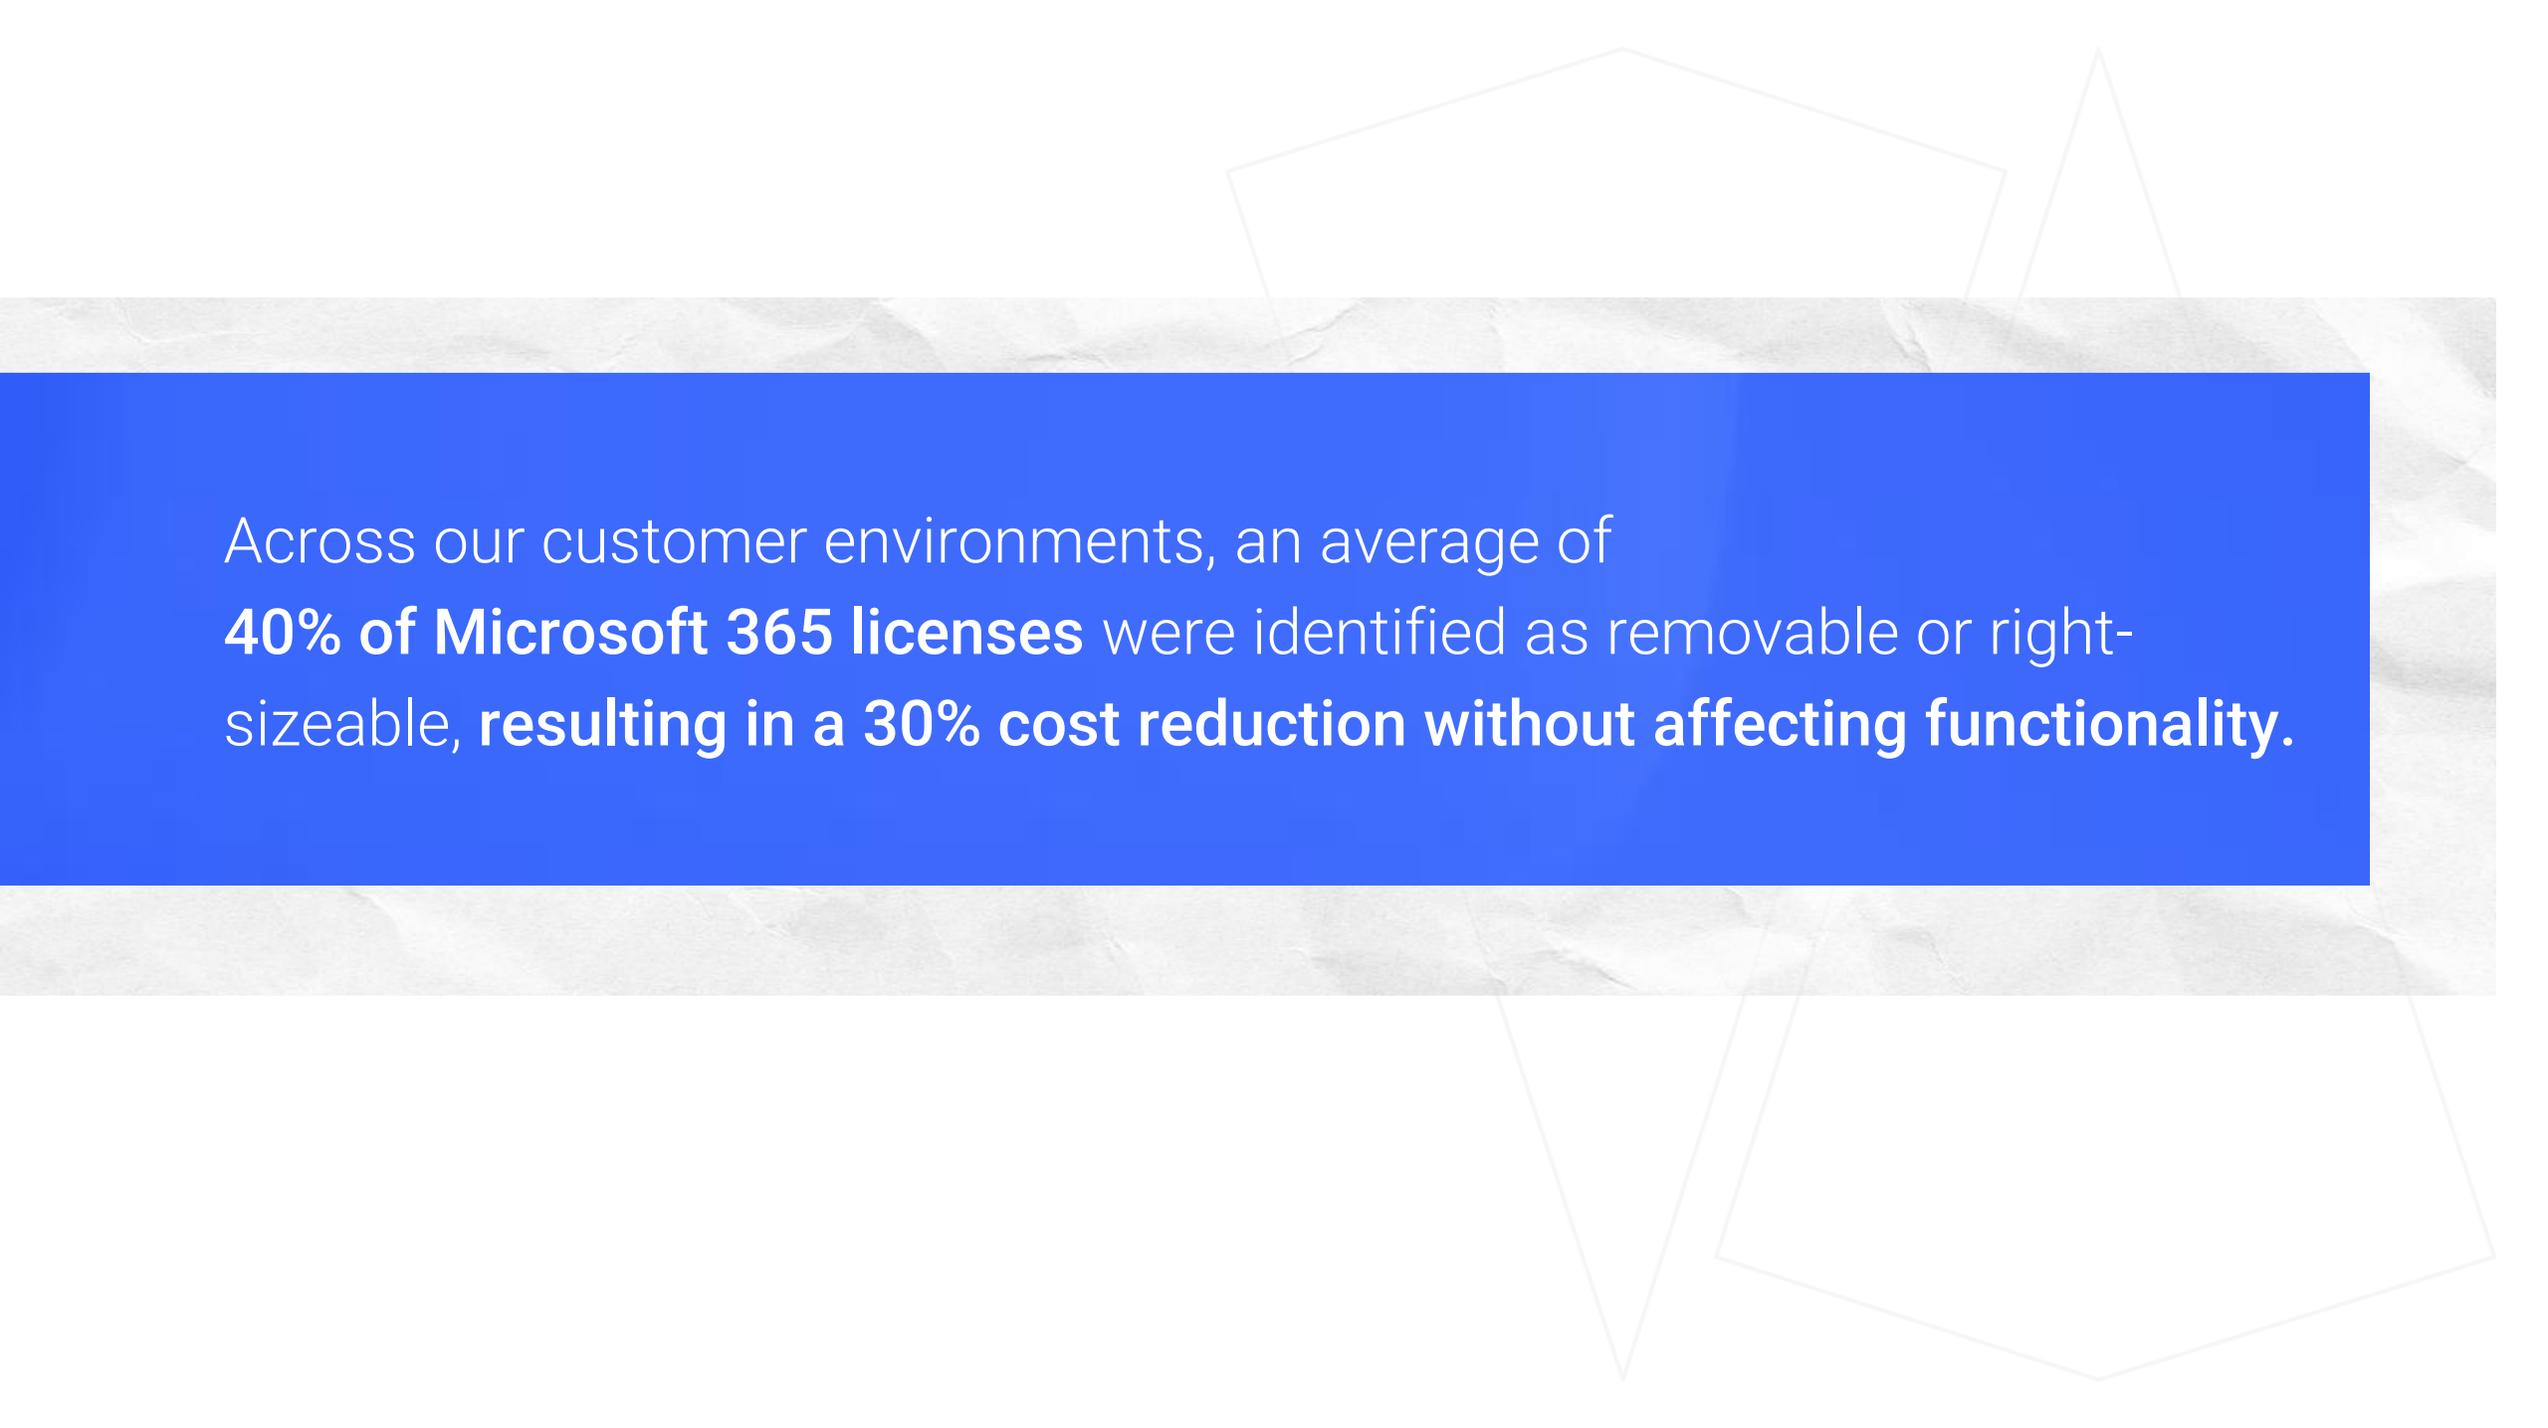

Beyond highlighting waste, **TeamsFox recommends the right license for every user and stays current with Microsoft's evolving license models.**

The background features a central blue banner with white text. Above and below the banner are horizontal bands of crumpled, light-colored paper. In the white areas, there are faint, light-gray outlines of geometric shapes: a pentagon at the top center, a triangle at the top right, a triangle at the bottom left, and a pentagon at the bottom right.

Across our customer environments, an average of **40% of Microsoft 365 licenses** were identified as removable or right-sizeable, **resulting in a 30% cost reduction without affecting functionality.**

TeamsFox

Storage Optimization

Microsoft 365 storage grows quickly and becomes expensive fast.

TeamsFox helps organizations understand exactly how Microsoft 365 storage is used, where it grows, and what drives cost.

With built-in low-cost archiving and automation that sustains control, **TeamsFox turns storage from a growing expense into a predictable, manageable asset.**

TeamsFox

Governance & Security

As Microsoft 365 expands, sensitive files remain accessible long after projects close.

TeamsFox gives IT and security teams clear visibility into who can access what, making it easy to tighten sharing, recertify guests, and prove compliance.

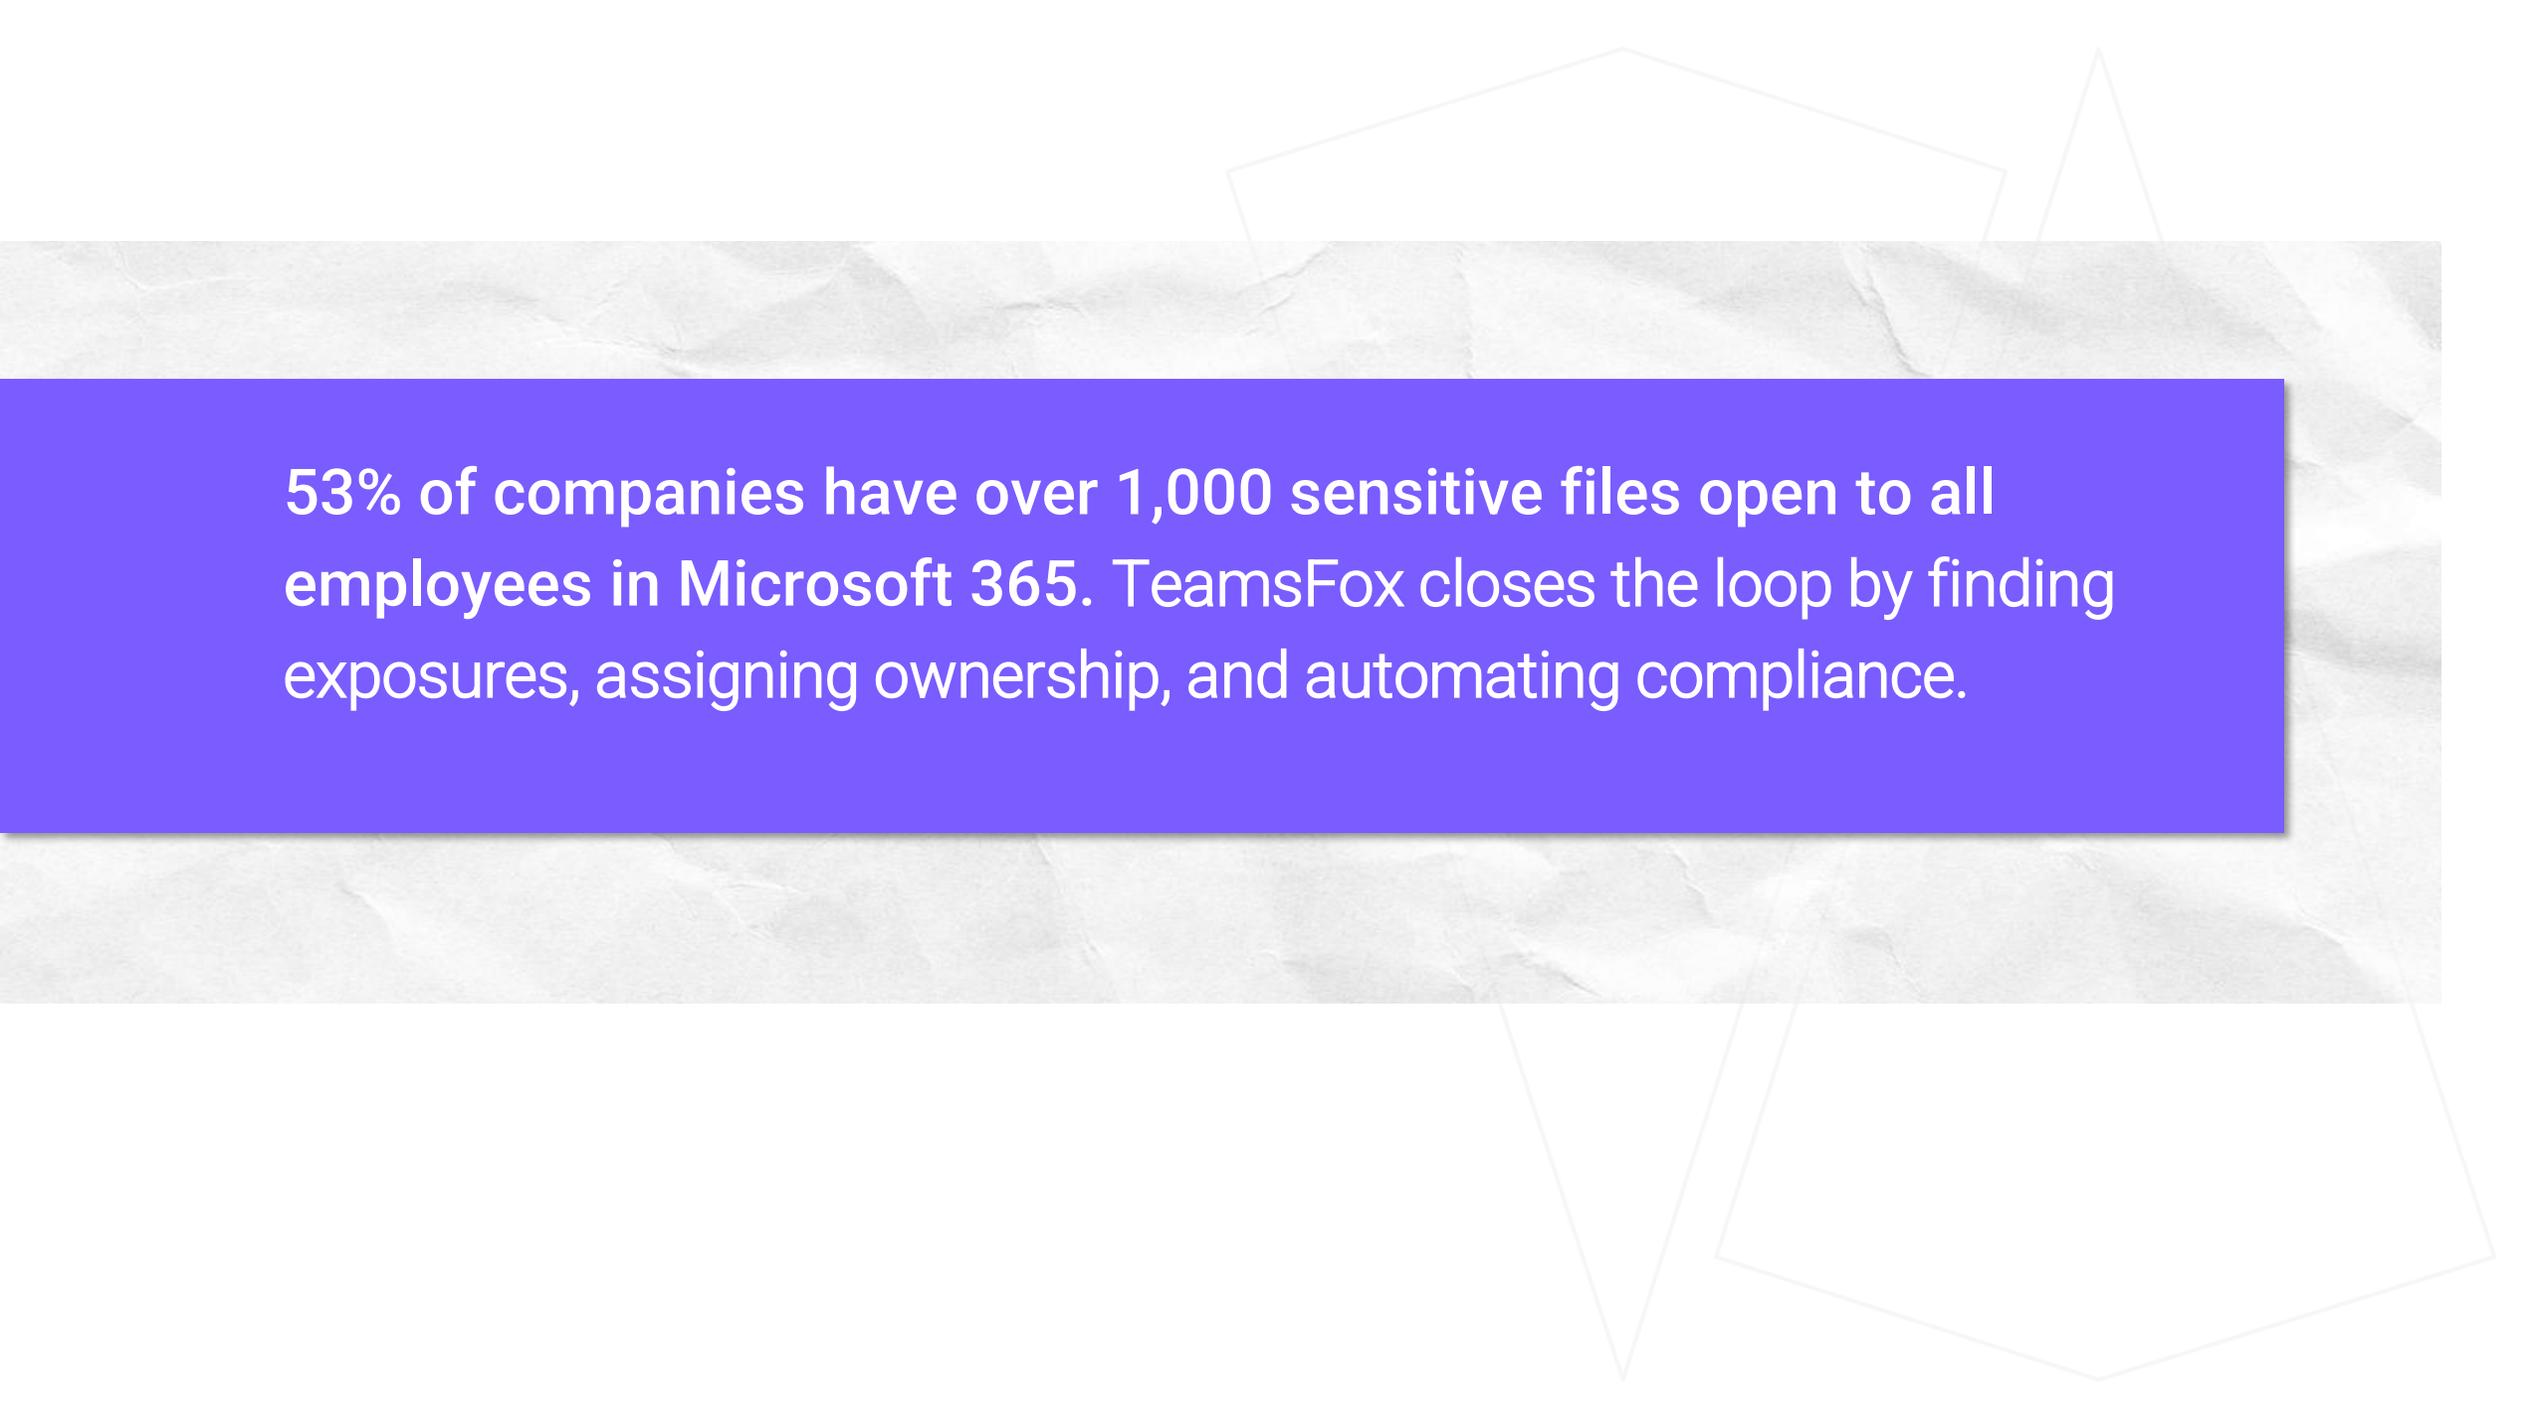

Automated recertifications and policy checks keep sharing aligned, even as teams and projects change.

Alerts &
Audit Trail

53% of companies have over 1,000 sensitive files open to all employees in Microsoft 365. TeamsFox closes the loop by finding exposures, assigning ownership, and automating compliance.

TeamsFox

Copilot Readiness

Copilot delivers better results when it runs on clean, well-governed data.

TeamsFox identifies what's ready, what's risky, and what needs attention before rollout.

We connect usage data with permissions and file quality to reveal which teams are primed for Copilot adoption and which need cleanup first.

Analytics

94% of IT leaders say they data is not ready for AI,
74% say Copilot introduces additional security risks

By removing redundant data, closing oversharing, and aligning access, TeamsFox ensures your Copilot works with trusted, compliant, and relevant information. **The result is improved accuracy, safer insights, and faster adoption across Microsoft 365.**

Why Choose TeamsFox

As Microsoft 365 environments scale, visibility fades. Native reporting windows expire, scripts require constant upkeep, and governance becomes reactive. Competing platforms add dashboards and policy layers, but stop at surface metrics or workspace-level controls.

The result is rising spend, growing risk, and fragmented ownership across licenses, data, and permissions.

TeamsFox replaces patchwork oversight with a true system of record. We connect real feature usage, file-level exposure, and storage drivers into one operational model with direct action and sustained automation built in.

01

Microsoft Provides Controls
We Provide Control.

Native reporting expires and policy enforcement is fragmented. TeamsFox maintains continuous, tenant-wide visibility across licenses, storage, and permissions.

PERSISTENT
GOVERNANCE

02

Competitors Surface Signals.
We Surface Evidence.

Workspace metrics and inactive-user flags miss file-level exposure. TeamsFox inventories risk and waste down to the file with ownership context.

TOTAL
VISIBILITY

03

Scripts Fix Moments.
We Fix Systems.

Manual exports and custom scripts create person-dependent governance. TeamsFox embeds automation that sustains optimization over time.

OPERATIONAL
MATURITY

04

Microsoft Optimizes for Adoption.
We Optimize for Efficiency.

Adoption alone does not reduce cost or risk. TeamsFox aligns usage, governance, and Copilot allocation with measurable financial discipline.
